KIT CURRENT TRANSFORMER SELECTION USE WITH FIELD INSTALLED ELECTRICAL-MECHANICAL STARTERS ONLY

- 1. Using motor voltage and full load amps (FLA) choose the current transformer ratio. This ratio will determine the "CT" kit part number to be entered on the Sales Order.
- 2. Using the proper equation in the last column of the chart, calculate the resistor setting "R". Enter this value (rounded off to 2 decimal places) on the Sales Order in the space provided.
- 3. Using LRA and FLA data, calculate the "CM" ratio setting and enter this value (rounded off to 1 decimal place) on the Sales Order in the space provided.

CM ratio setting = $\frac{LRA}{FLA}$
