Subject: New Bellows Style Shaft Seal Available for Family 3 & Family 4 YDTL Compressors		

GENERAL

Starting in March of 2001, YORK began using a new **BELLOW STYLE SHAFT SEAL** on all manufactured YDTL Family 3 and 4 compressors. This bellows style seal was very successful during beta field-testing and this seal is now available to be retrofitted into existing compressors of this style.

FOR RETROFITS

To use this new seal order the following retrofit kit part number: **464-50050-000**. The Baltimore Parts Center has set up this kit so that it is only available to our YORK field offices and is not available to outside contractors at this time. Included in the kit will be everything needed to complete the conversion along with a drawing that explains how to assemble the new seal.

FOR MAINTENANCE

In addition to the retrofit kit, a maintenance kit is available for use on compressors supplied with the bellows style shaft seal or compressors retrofitted with this seal. This maintenance kit part number is: **464-50051-000**. This kit includes all items in the retrofit kit, except for the cover plate and the installation drawing.

If you have a YDTL compressor, which has a leaking shaft seal, we are strongly recommending that you consider changing to this new seal.
